

Hydrodec Products & Services

**Used Transformer Oil Collection
& Treatment: Remove uncertainty,
doubt and PCBs.**

Used Transformer Oil Collection & Treatment

Through a patented process, Hydrodec offers a sophisticated and renewable solution for used transformer oil that is vastly superior to the disposal for energy recovery practices used in the past. With near zero emissions, this environmentally responsible and sustainable means of treating used transformer oil removes all detectable levels of PCBs.

Asset Recovery

From beginning to end, Hydrodec can facilitate the collection, transportation and processing of used PCB-free and PCB-regulated naphthenic-based transformer oil from power utilities and electrical maintenance companies. Hydrodec helps companies get the most of their valuable assets. Used oil can be drained directly from transformers on site, or from storage tanks at service facilities - wherever the need arises. This used oil is transported by an accredited carrier and processed by Hydrodec's patented technology all within compliance of EPA regulations.

Environmental Impact

Hydrodec removes more than PCBs from your used oil. Companies no longer have to question where their oil goes after it leaves their facility. There is no second-guessing the environmental impact of its disposal because your used oil is never burned, blended or reclaimed. Hydrodec's process helps reduce the depletion of the world's oil reserves and is a far better solution than the secondary fuel market, which creates greenhouse gas emissions and has a short product life cycle.

Hydrodec is the only company in the world that can transform your used oil into a high quality naphthenic based transformer oil or base oil called **SUPERFINE™**. Our plant in Canton, Ohio has a capacity to re-fine up to 20,000 gallons per day, can treat PCB levels up to 49 ppm, and serves the US, Canada, South America, the Caribbean and Mexico. EPA permit for up to 2,000 ppm pending approval.

Used Transformer Oil Disposal Choices

*EPA permits for up to 2,000 ppm pending approval
